

Date:

Wednesday Challenge Form

Group Members: Ian, and half the class.

Problem Statement: Toss tubes to each other and try to have everyone catch them so nobody drops them. there are three ways we have to throw it before we win

Approach: Try and do it normally then when everyone knows what is going on practice on the hardest step so it becomes easy. we had one leader and that was me. i would count and then everyone would throw. i also said we should practice and turn around when we get to the last step. these two steps made it easy to win.

Solution: Practice the hardest parts of a challenge until it becomes easy. then work together and have one person organize the group. that makes it easier to achieve the challenge. We won too so that is good.
