

Wednesday Challenge Form

Group Members: Ian, Christian, Naylin, Audry

Problem Statement: Build a paper bridge that can span 8 inches
And hold as many pennies as possible.

Approach: I was sick the first day of the challenge I was sick and so I was not at school for the approach but I believe they a lot of testing with different designs and ratios.

Solution: take the best design we had tested and use that also we tested designs of putting pennies on the bridge and we found a flat bed followed by a stack was the best

Lessons Learned: take it slow. We did so bad because we were rushing more than in our tests so we achieved a much lower score.
