Wednesday Challenge Form

Group Members: alvin, keilah, cole, ian

Problem Statement: see how many skateboards can fit on a 5 by 5 board of birch wood.

Approach:sketchup the board and the wood and find out how many can fit. We measured every 2 inches and then made the board and copy and pasted it over the wood board.

Solution: we can fit 9 boards and that will make whole decks.

Lessons Learned:always use sketchup.
